Ontology-based Queries over Cancer Data

- Alejandra González-Beltrán: UCL Dept. of Computer Science & UCL Computational and Systems Medicine[1]

- Joint work with Ben Tagger and Anthony Finkelstein

- Collaboration with NCRI Informatics Initiative

- Support **high-level** and **descriptive** queries of **cancer-research data sources**, based on **concepts** from the cancer domain (NCI thesaurus)

- Query rewriting to the target query language: navigation of the structure of the data resources without the user being aware of these structures.

- Our approach, based on ontology reasoning, is general

- The implementation is based on the caGrid infrastructure (caBIG® project).

- Main publications: IEEE CBMS 2009, BMC Bioinf 2009, SWAT4LS 2010 (Best paper)
