

UCL Department of Computer Science
CS M038/GZ06: Mobile and Adaptive Systems

Hailes, Jamieson, Karp

2008-2009, Term 2

One-pager: ExOR

Due: start of lecture, 2 February 2009

Instructions: answer the following question as succinctly as possible in 200–500 words (roughly one double-spaced, typed page).

ExOR uses the ETX routing metric, which you have learned about earlier. However, ExOR modifies ETX to only use the forward delivery probability. Why is this? Cite the relevant portions of ExOR's design in your answer.
